Protecting the Salish Sea and its surrounding communities
WORKING FOR A HEALTHY SALISH SEA

These pages reflect the many efforts that Georgia Strait Alliance undertook during the past year to protect this region that we love so much.

Our team’s accomplishments include the success of our efforts to protect endangered Southern Resident orcas; our leadership on demands for effective oil spill response in B.C.; engaging volunteers in communities around the region to gain climate accountability from the Carbon Majors; advocating for strong sector targets to give teeth to the province’s Clean BC commitments; sharing our stories in new ways and with new communities; and seeing our Clean Marine BC program continue to grow. It was a remarkable year. We have lots to celebrate and your support made these achievements possible.

However, as I write these words, the past year seems like a lifetime ago. The world is still reeling from the blunt impact of the COVID-19 pandemic, as we are learning to adapt to an ever-changing normalcy. At GSA, we’ve had to re-imagine new ways to connect, engage and mobilize supporters to help protect the Salish Sea when we cannot meet with people in person. We’ve been bringing people together online, and connecting more with our colleagues, allies and governments virtually. Through it all, we are staying focused on our core mission to develop long-term, climate-forward solutions to marine threats and habitat protection in this incredible region as our way of supporting coastal communities.

At the same time, the voices of Black, Indigenous and people of colour are making clear that harm is being done by the white supremacist structures in our society, including those in the charitable and environmental non-profit sector. As you know, the work of Georgia Strait Alliance focuses on the

Our Mission

To protect and restore the marine environment and promote the sustainability of Georgia Strait, its adjoining waters, and communities.
connections between the marine environment and healthy, sustainable and resilient coastal communities, but this work is being done by an organization where the staff and board do not reflect the demographics in this region of B.C., and by an organization that has, until now, ignored the reality that environmentalism is intersectional: it builds links between power structures, injustices and harms being done to racialized and marginalized communities.

As we move into our 31st year, our commitment to being strong advocates and stewards of the Salish Sea includes becoming better allies and defenders of the health of all of its communities. We are also committed to looking inside in order to define and implement meaningful changes in the way the organization functions, and to doing the work necessary so that the organization and its regional advocacy are welcoming, safe and will not continue to cause harm. We are committed to this journey and it’s one we would like to undertake and share with you, so you can play an active role in these changes and keep us accountable.

Thank you for all of your generous support. It makes us a stronger and more effective organization every day—and for years to come.

Christanne Wilhelmson
Executive Director

The global pandemic has exposed the fragility of our world, bringing into perspective the responsibility of fighting for and protecting local communities. As the new normal begins to take shape, let’s work together for a better and healthier future for the many places that we call home in the Strait of Georgia. We must whole-heartedly commit to the Salish Sea, the marine environment and the people who are being harmed by the degradation of our land, water and oceans.”

If we can protect Southern Resident orcas, we’ll protect the Salish Sea

During The Year We Focused On:

- Regulations for key contaminants that enter waterways through our work with the federal Contaminants Technical Working Group for Southern Resident orcas.
- Advanced wastewater treatment at Metro Vancouver’s largest treatment plant on Iona Island in Richmond, B.C.
- Transitioning open-net pen fish farms to closed-containment facilities on land.
- Plastic pollution plans at national and provincial levels.
- Better management for ship anchorages in the Southern Gulf Islands.
- Advocating for salmon protection, restrictions on fishing and noise reductions to support orca protection and recovery.
- A national stormwater management strategy.

Thanks to your support, we’re continuing to dialogue with the federal government to press for the implementation of new — and even stronger protections — for Southern Resident orcas.

Photo: (l) skeeze from Pixabay, (r) Cheryl Onciul

As an umbrella species, Southern Resident orcas benefit the region’s entire ecological community in the Salish Sea. Unfortunately, the population is critically endangered. To reverse the Southern Residents’ rate of decline, strong and sustained protection measures are necessary to improve Chinook salmon availability, reduce noise in the region, and particularly to address the complex and multifaceted issue of marine contaminants.

At Georgia Strait Alliance, we are advocating for pollution source controls, region-wide advanced wastewater treatment and stormwater management, as well as improved research into the impacts of toxins on the Salish Sea ecosystem.

Solutions for marine contamination require comprehensive and long-term thinking and planning. By meeting with senior government officials and decision makers throughout the year, we made the case for these measures, while in coastal communities we advanced our initiatives to curb pollution in local waterways.
The Iona Treatment plant discharges to the mouth of the Fraser River, British Columbia’s most important salmon-bearing habitat. We know that pollution enters the ecosystem in the oceans and goes up the food chains, so one of the reasons Southern Resident orcas are one of the most contaminated mammals on the planet is because of the sewage we put into the ocean.”

Christianne Wilhelmson
Georgia Strait Alliance, News 1130

1344 letters
Sent to Metro Vancouver asking for advanced wastewater treatment. Metro Vancouver’s largest wastewater treatment plant is scheduled to be upgraded, and we need to make sure that the new treatment methods significantly minimize the flow of contaminants into local waters.

+1000 more
Letters sent to the federal government with input on 2020 protection measures for Southern Resident orcas.

100% more
Vessels must now remain 400 metres from Southern Resident orcas. We advocated for this change because it helps minimize the threat of underwater noise and disturbance to Southern Resident orcas.
ENERGY

Canada is not prepared to effectively respond to an oil spill.

We saw that in B.C. with response failures during the Nathan E. Stewart sinking in Bella Bella and the Marathassa spill in Vancouver Harbour. We’re working to change that.

We believe that communities and ecosystems shouldn’t have to bear the consequences of someone else’s failure. We have an industry-run clean-up system, with low standards, where there are no requirements that polluters or spill response organizations actually remove spilled oil from an ecosystem. And, that industry now includes the federal government, through Ottawa’s purchase of Trans Mountain pipeline.

Canada’s oil spill response doesn’t work

In Bella Bella, coastal weather conditions shut down spill response for 11 of 40 days, and there was no meaningful recovery of spilled fuel and other pollutants. In the Vancouver Harbour, less than 40 percent of the fuel was recovered, despite the spill occurring from a ship at anchor in the city’s largest harbour on a calm and clear day, with the largest concentration of spill response equipment on the B.C. coast less than an hour away.

We’re working to change that.

We believe that communities and ecosystems shouldn’t have to bear the consequences of someone else’s failure. We have an industry-run clean-up system, with low standards, where there are no requirements that polluters or spill response organizations actually remove spilled oil from an ecosystem. And, that industry now includes the federal government, through Ottawa’s purchase of Trans Mountain pipeline.

We’re focusing on four areas to advocate for effective spill response:

- **Coastal communities.** These have the most to lose from a spill, and they must have a role in overseeing and planning oil spill response.
- **Wind, wave, and tide conditions.** These pose significant constraints for the effectiveness of containment booms along much of the Trans Mountain’s tanker route and, in some cases, make it impossible to respond to a spill effectively. Oil shippers shouldn’t be moving products in coastal conditions they can’t clean up in a spill.
- **Research + Development.** Spill response equipment is largely unchanged since the 1970s, and this is one reason that usually only 10-15% of a spill is cleaned up. Significant investments are needed to address the lack of appropriate response equipment for coastal weather and the conditions it creates on the water.
- **Clean-up standards.** We need to have at least 80% of spilled oil recovered, with escalating fines for instances when this standard isn’t met.

We believe that communities and ecosystems shouldn’t have to bear the consequences of someone else’s failure. We have an industry-run clean-up system, with low standards, where there are no requirements that polluters or spill response organizations actually remove spilled oil from an ecosystem. And, that industry now includes the federal government, through Ottawa’s purchase of Trans Mountain pipeline.

- **Clean-up standards.** We need to have at least 80% of spilled oil recovered, with escalating fines for instances when this standard isn’t met.

The National Energy Board’s recommendation relies on oil spill planning that’s based on an unscientific hope that diluted bitumen (oil) won’t sink into coastal waters.”

CLIMATE CAMPAIGN

Locally, the consequences of fossil fuels are getting more and more severe.

That’s the reason we’ve taken a grassroots approach to climate justice, finding ways to focus on and support communities, which are on the frontlines of the climate emergency.

This past year, we ramped up our work across the province in coastal communities that are ready to take action on climate initiatives: 25 municipalities in B.C. have sent letters asking the fossil fuel companies to pay for their fair share of the cost of damage to communities caused by climate change. Fossil fuel companies should not make billions while our communities pay to deal with climate change.

Local decision-makers know that the oil industry could lead the way to a green-energy transition, but it doesn’t want to. That’s the reason that we’re working with local governments so we can fight together for the climate-stabilizing economy that our oceans and planet so urgently need.

With your help, Georgia Strait Alliance continues to stand up for coastal communities, their economies, and the ecosystems they exist in. It’s time for people and nature to come ahead of Big Oil’s profit.

Our hard work is paying off!

CleanBC — the provincial government’s plan to reduce greenhouse gas emissions — now has a lot more accountability. When we, and a group of allies, first approached the government two years ago about including accountability mechanisms in the plan, these issues weren’t being thought about — and now they’re part of this important legislation. These include establishing an independent body of experts for oversight, setting an interim target on the way to the 2030 goal, stronger reporting on progress, and setting sectoral targets for different parts of the economy.

[The government subsidizing fossil fuel development] is as though we are revving the engine while we’re parked.”

Anna Barford,
Georgia Strait Alliance, National Post

At GSA, we’re focussed on getting the government to clearly define sectors and their greenhouse gas targets — due to be set by March 2021 — to allow for emissions targets to be shared fairly across the economy and allow us to build the green economy that we need. We know the devil is in the details, so we’re watching closely.
With greater accountability, we can see:

- where the province is making climate progress
- where there is more work to do as carbon emissions across the economy are reduced

At GSA, we have been taking action on our deep concern that the Province is undermining climate action goals by providing large subsidies to fossil fuel development, making it easier to build new fossil fuel projects at a time when we need emergency climate action. That’s the reason that we’re advocating for an end to these subsidies, which take the form of billions of dollars in tax relief, subsidized power, electricity line construction, and cost exemptions to highly profitable major international corporations.

We’ve made a big difference in how the Province tackles climate change — and our effectiveness is based on your support.

4600

The number of Orca Action Team supporters who are now helping us to achieve the boldest protections Southern Resident orcas have ever had.

We are growing our volunteer outreach teams in Vancouver and Victoria, offering recruitment and training events in both cities, and expanding virtual volunteer opportunities.

Why?

These outreach teams and virtual events allow us to immerse ourselves in communities where we can forge connections by engaging in thoughtful conversations. Our objective is to increase awareness and understanding about the threats to the Salish Sea, and to show how our campaigns and work are having a positive impact.

CLEAN MARINE BC

We partner with boating facilities and recreational boaters to support them in reducing their impact on the marine environment.

When facilities are more effective at keeping pollutants out of surrounding waterways, conserving energy and water, and minimizing habitat degradation, the region’s interconnected and interdependent waterways will be healthier.

During the year, we certified salt and freshwater facilities, including the Kelowna Yacht Club, the first in the Interior Region.

Clean Marine BC welcomes these newly certified facilities:

- Lions Gate Marina
- Kelowna Yacht Club
- Victoria International Marina

It helps boating facilities get recognition for the good work they’re doing, but it also helps them recognize that there are some things in the way they run their facilities that may be having a negative impact on the local waters.”

Christianne Wilhelmson
Georgia Strait Alliance, CBC
Daybreak South

Beyond Boating

Keeping waterways healthy entails more than preventing pollution from operations. It also includes marine habitat initiatives, including installing artificial reef balls and herring spawning nets, transplanting eelgrass, installing nesting boxes for Purple Martin swallows, expanding an endangered Garry Oak meadow, and supporting local ecotourism — all of these are examples of what some Clean Marine BC facilities are doing to keep the Strait of Georgia healthier and more resilient.

Minimizing the risks of recreational boating
Docks constructed of concrete with encapsulated flotation
Encapsulated steel pilings installed instead of toxic creosote-treated wood pilings
Limited boat maintenance activities permitted on site
Fireplace fueled by bioethanol
LED dock lighting with photocells

These include:

- A well-documented emergency response plan
- Mandatory sewage holding tanks for moorage customers
- Onsite pump-out facility, with access at all dock areas

CMBC practices were used — for the first time — in the development and construction of a new facility, the Victoria International Marina.

2020 FINANCIAL HIGHLIGHTS

Year ended March 31, 2020

Financial Position

Long term investment $40,297
Capital assets $13,350
Payables and accruals (28,416)
Deferred contributions (544,232)
NET ASSETS $187,791

This report is a summary only and not intended to reflect the complete financial status of the Georgia Strait Alliance. Members who wish to receive the full financial statements should contact our Nanaimo office at 250-753-3459.

Revenues

Donations $348,821 (45%)
Events, investment earnings and other $61,874 (8%)
Grants $364,969 (47%)

Expenses

Programs $635,141 (79%)
Administration and Fundraising $168,192 (21%)
Amortization $3,795 (0%)

Excess of expenses over revenues for the year ($31,464)

In-Kind Contributions

In addition to the revenue above, GSA received an estimated value of $42,027 in donated goods and services and $28,821 in volunteer time during the year ended March 31, 2020 for a total of $70,848.

It was a remarkable year

We have so much to celebrate and your support made these achievements possible!
